

VB Script Host error during MassCore runtime installation.

Problem

When installing MassCore Runtime in MT Security panel, you get a "Windows Script Host" error message, related to MassCore Setup/bcd.vbs
After the installation and a computer reboot, Pyramix/Ovation does not start in MassCore mode, and your Merging Ravenna device is not detected.

Solution

The MassCore boot line can't be created properly.
Uninstall MassCore through *MT Security panel* and restart the computer.
Go in your computer BIOS and make sure that in the *Boot* page, the *SecureBoot* option is disabled.
Start on the standard Windows boot line, not the MassCore line.
Reinstall MassCore Runtime through MT Security panel and restart the computer.
