

# VCube installer roll back

Upgrades can at time end up with a repair process or rolling back to the previously installed version.  
[Downgrading to a previous version always requires a Cleanup of the system.](#)

1. Merging recommends that you perform a fresh install of VCube, instead of doing an upgrade.  
Uninstall VCube from Windows Programs & Features and reboot your computer.
2. If the installer stills rolls back, please [perform a MT Cleanup](#).
3. If after the cleanup you still can't install Vcube, please contact [support@merging.com](mailto:support@merging.com).
